FOR IMMEDIATE RELEASE

28 February 2014

In 2012 the author sold a book to one of the principal scientists from the Exploratorium Museum of Science in San Francisco on a table with nearby hands on wind and sail exhibit, we went through the book page by page and I showed him how the beam to mast height ratio of the AC45 class boats fit into the general theory expression and how the ratio and driving forces help those AC45 boats make the speeds they do with the top notch sailors who sail them. The same applies to the AC72 saiboats. "They fit into the general theory."
